

## PRO-INT™

The PRO-INT incorporates features of a standard shot timer and a range controller into one product. Functionally, the PRO-INT is equivalent to the PRO-Shot III shot timer from Competition Electronics. However, the PRO-INT has a few added features. First, it comes with a built-in range interface port with a 12 volt DC output compatible with all Action Target electrically triggered controllers and actuators. Second, the PRO-INT comes with an external power input that eliminates the need for the usual 9 volt battery inside the unit. This way, both the shot timer and the rest of the range can be powered by either a rechargeable battery belt pack (BP-1) or a wall transformer needed for your application.

As it records the time intervals between your shots, the PRO-INT also controls its 12 volt output. The output is turned on at the start of the par time. Since you can set the par time to any value from 0 to 99 minutes, this product is ideal for accurate control of a single target or bank of targets for limited exposure time.

**What comes with the PRO-INT:**

- This controller comes as a single, hand-held unit.

**What else you need:**

- Air flow controller (like the TI-1)
- Target actuators
- 12 volt power
- All necessary cords, cables, and hoses.
