

SIMPLE RANGE™

- Hand-held convenience
- Target display status changes on the screen
- Edge and face targets manually
- Create repeatable face and edge scenarios
- Fingertip touch screen control (works without a stylus)
- Wireless ethernet connection (802.11b)
- Create timed face and edge durations on the fly
- Seamless connection to your SmartRange computer

When you need both the convenience of a hand-held wireless controller and the power of a full-size range computer at the same time, SimpleRange is your answer. Designed to run on "Pocket PC" compatible PDA's, SimpleRange gives you fingertip range control in the palm of your hand. The user friendly interface lets you control your targets with just a tap on the PDA touch screen, and the wireless connection lets you move around the range without dragging cords along behind you.

If you need more options to run your training scenarios than the basic control screen provides, you can use the SimpleRange software and the same wireless PDA to tap into the SmartRange software loaded on your range computer. The same programs and scenarios you run on your desktop with SmartRange can now be accessed wirelessly as you conduct training from the firing line.

System Requirements

- PC compatible computer with SmartRange 1.85 or later connected to a wireless ethernet (802.11b).
- HP iPAQ rx1950 series PDA
- Microsoft Windows Mobile(TM) 5.0 for Pocket PC
- Samsung 300Mhz processor
- Integrated Wi-Fi (802.11b)
