

CONTROL TOWER

RANGE STRUCTURES

TECHNICAL DATA

The Action Target Control Tower is a state-of-the-art range control center. It comes fully equipped with a heater and air conditioner, white lights, red lights, and a counter top situated on two spacious cabinets. The resulting work desk has a place for the range computer, printer, and PA system.

The tower is placed high enough to see an entire range with its floor located 12 feet off the ground. The all-steel structure is galvanized to give the tower a strong resistance to corrosion.

The office floor space measures 8'11" wide and 7' deep. The counter top measures 2'x 8'11". The floor, walls and ceiling are all insulated. The inside and outside is finished with metal siding giving the tower a durable and very professional appearance.

The Tower package comes with a tower office which is equipped with windows, door, cabinets, air conditioner, and electrical breaker box. The Tower office is shipped fully assembled with exterior siding.

The Tower roof has a 3 foot over hang on all sides. It has three windows; two windows on each side and a larger window on the front. The side windows measure 3' x 3' while the front window measures 8.5'x 3'.

The Tower requires that both 120V and 240V be provided. These voltages need to come from the main power line for the range and be connected to the breaker box in the Tower. The job may also require that an air source and pressure gauge be included in the Tower. If it does, this is a custom part and Range Planning will need to determine the best way to run the air on a job by job basis.
