

PT DROP-TURN™

- Gravity powered turning action
- Adjustable exposure times
- Simple reset and multiple trigger options
- Simple reset and multiple trigger options
- Great for shoot/no shoot scenarios
- Ideal for tactical training scenarios

The PT Drop-Turn™ is a gravity-operated portable turning target that doesn't require additional power of any kind. It is the perfect way to increase the stress and realism of your training exercises in a simple and inexpensive manner.

A cardboard target mounts to the frame and begins in the edged position, unavailable to the shooter. When activated, the target begins its vertical drop and then suddenly turns 90 degrees to face the shooter. As the target continues to drop, it turns back 90 degrees and finishes in the edged position once again. Simply lift the target straight up to reset it, and then repeat the scenario as needed. The speed of the drop-turn motion can be easily adjusted, and a simple pull on the trigger cable is all that is required to initiate the action.

The PT Drop-Turn™ lets you train for spontaneous threat situations and high-speed combat reaction with extreme simplicity and portability. By using 3 or 4 units in the same scenario, you can mix no-shoot targets in with the bad guys and train for multiple adversaries and threat recognition.

Size: 3' high plus cardboard x 24" L x 24" W
 Weight: 35 lbs.
 Handgun: Cardboard target
 Rifle: Cardboard target
