

PT PLATE RACK™ WITH PNEUMATIC RESET

- Reactive knock-down action
- Through hardened AR500 steel
- No-weld target plates
- Pneumatic reset
- Angled splatter deflector plate
- Variable target plate shapes

The deflector plate and target heads on the PT Plate Rack™ with pneumatic reset are made of the finest through hardened 550 Brinell steel, and our innovative "no-welds" design means there is nothing to break.

After you knock the targets down, set them up again by activating the pneumatic piston with a variety of control devices. You can use your range's air compressor as the power source, or you can use a CO2 tank for more remote locations.

With simple yet innovative engineering, we have reduced the cost and complexity of the unit without sacrificing strength or performance. The result is a superior plate rack at a dramatically lower price.

Size: 4.5' H x 9' L x 24" W
Weight: 250 lbs.
Handgun: AR500 or AR550 / 10 yards+
