

TASK™

TACTICAL APPLICATION SCENARIO KIT

- Complete portable tactical training system
- Run up to 8 pneumatic powered animated targets
- Choose different target options, including steel
- Mount targets anywhere
- Simple air hose connections
- No computer or electronics
- Hand held controller
- Easy to set up and reconfigure
- Use a small air compressor or a CO2 tank

The TASK Tactical Application Scenario Kit is a collection of very easy-to-use components that let you create and control sophisticated tactical training exercises quickly and simply.

Your complete TASK package contains the following:

- 8 pneumatic powered target actuators (cardboard or steel)
- 1 MAN-8 hand held target controller
- 1 POWER-LINK control interface (battery powered)
- 1 POWER-LINK battery charger
- 1 CO2 tank regulator
- 500 feet of blue air hose
- 500 feet of green air hose

Here's how your TASK system works:

1. Mount your targets on saw horses, behind barricades, on walls, or anywhere else you want to.
2. Use the supplied air hoses to connect each target to the POWER-LINK control interface.
3. Connect your chosen air source to the POWER-LINK control interface.
4. Connect the MAN-8 hand held target controller to the POWER-LINK control interface.
5. Flip the switches on the MAN-8 controller and watch your targets jump in and out of view.
6. Control your scenario and conduct your training.

The TASK system is the perfect way to teach critical tactical combat skills like moving and shooting, moving to cover, using cover properly, engaging multiple threats, threat identification, and team tactics.

At the end of the day just pack up all the pieces for safe keeping, re-charge the POWER-LINK battery, and think up new scenario ideas for tomorrow.
