

## AIR COMMAND ULTRA™

The Air Command Ultra wireless target control system lets you operate targets on your range without the hassle of dragging long cables around to be tripped on or damaged.

Air Command Ultra gives you the ability to program target movements and training scenarios with the convenience of wireless technology.

Air Command Ultra gives you the ability to access pre-programmed training drills and scenarios from a cordless phone which allows you to spend your time observing on the range instead of walking back and forth to the range computer.

When used in conjunction with our SmartRange range control software, Air Command Ultra allows you to access any number of specialized program scenarios written and stored on your SmartRange computer.

For example, assume you have written and saved six different drill programs on your range computer. By pressing the number on the Air Command keypad that corresponds to the program you have saved on your computer, that program will be activated and will run until it is finished. You can then run the same program again or move on to the next drill - all without control wires or constant trips back to the range computer!

Using the SmartRange software, you can program the targets to turn, lift, bob, or whatever movement your target is capable of. You can also assign the targets' exposure time in seconds to increase or decrease the difficulty of the drill. Once the training scenarios and drills have been saved in the computer, they are assigned a number and can be immediately accessed from a cordless phone with a simple push of a button.

The Air Command Ultra system is compatible with almost any cordless phone making it easy for you to implement and replace your control interface.
