WIRELESS
Built in WiFi automatically connects targets together in any configuration.

HIT SYNC TECH
Proprietary system recognizes hits in scoring zones and provides shot time and accuracy analytics.

ENGAGING
Powerful app allows for complete control of targets. Custom courses of fire can be created on the fly for training and competition.

SAFE
Reactive target system without danger of splatter or ricochet for use indoor, outdoor, up close or at long range.

MODULAR
Set up numerous targets at any time, in nearly any configuration and in any environment.

VERSATILE
Pop-up or swing-up targets are available for short and long range or CQB use and senses hits from .22LR to .50 BMG.
THE FUTURE OF FIREARMS TRAINING

AutoTargets allow shooters to interact with their targets in a way never before possible. With its powerful hit sensing technology, advanced app, portable wireless activation, and revolutionary programmability, AutoTargets is truly changing the way you shoot.

“With hit zone detection technology, AutoTargets significantly increases the training time available for shooting by eliminating the need to walk down range to tape/repair targets. When training time is in short supply this target system will provide instructors with the ability to give better training in less time and is an absolute must for larger groups or shooting at extended distances. This really is a game changing target system!”
—Kyle Schmidt, Tempe Police Department & Firearms Trainer

1 HIT SENSING TARGET
AutoTargets accurately senses hits in up to four zones and records them on its powerful app. The target can accurately score up to 400 handgun or 1000 rifle rounds, depending on bullet diameter.

2 REACTIVE LIFTING
The target drops and lifts based on hit zones, score requirements, and time limits that are set on the app. Both pop-up and swing-up options are available.

3 PORTABLE DESIGN
The 15 pound unit is powered by a rechargeable battery and CO₂ tank making it easy to set up anywhere.

4 WIRELESS CONTROL
Each lift unit functions as a long range sender and receiver, forming a mesh network with all connected devices out to any shoot-able distance.
EFFECCIVE TRAINING TOOL

AutoTargets provide effective training through features that save time on the range, recreate real world scenarios, and provide stress induced situations. The app makes it possible to create repeatable or random shooting programs all while keeping score of accurate shots.

FAST THROUGHPUT

AutoTargets uses a Patent Pending hit sensing target that is controlled on a wireless device. This means that targets can be scored immediately without needing to walk down range to check and tape targets.

- **Dynamic Training:** Instructors can build dynamic training scenarios for their officers that replicate real-world engagements. Recreate last week’s officer involved shooting on the range to help others benefit and improve.
- **Immediate Feedback:** Performance, speed and accuracy are automatically scored for each shooter right on the tablet controller through the app. Individuals or team scores are processed without having to call the range cold to count, score, repair or reset targets.

PROGRAMMABLE

The AutoTargets app is compatible with Android, iOS, and Kindle Fire and provides complete control of target systems within a field of engagement.

- **Programmability:** Users can easily determine target presentation and reaction criteria based on time delays, time limits, shot placement, and hit count.
- **Reactive and Responsive:** AutoTargets only fall down when you tell them to. Instructors can base these reactions on time limits, hit counts, total score on the target or more complex shot placement like the popular “Mozambique” Drill.

PRESSURE SENSITIVE OPTION

AutoTargets is also available as a pressure sensitive system for use with marking rounds. The non-lethal target option is a separate target and lift unit designed specifically for Airsoft, and other force on force training rounds. Because the rounds do zero damage to the target, agencies can expect extremely long life from this specially designed hit sensing target.

- **Multi-Zone Hit Detection:** The pressure sensitive target has up to four hit zones that detect hits from Airsoft, Simunition, UTM, FX, and Force-on-Force rounds.
- **Swing Up Movement:** Targets swing in and out of view to create timed shooting windows or react to accurate hits.
- **Paper Overlays:** The pressure sensitive target allows instructors to overlay common paper training targets adding more realistic shoot and no-shoot target options.
- **Scoring:** Targets are scored with the same app as the live fire targets, providing immediate audio and visual feedback as well as pre-programmed responses.

The AutoTargets app is full of powerful options. See videos and demos at ActionTarget.com/AutoTargets

UNRIVALED VERSATILITY

Other hit sensing target systems exist, but none of them have the flexibility, portability, and ease of use of AutoTargets. AutoTargets functions with a battery and CO₂ tank, making it easy to set up anywhere—even the most remote locations. Because AutoTargets requires no permanent range improvements or infrastructure they are ideal for multi-purpose ranges and those operating on tight budgets.

SHOOT HOUSE

AutoTargets is a great tool for shoot house training. A universal mount makes it possible to attach AutoTargets to walls, furniture, or portable bullet traps. AutoTargets boasts both pop-up and side lift options, providing variety for training drills. The side lift option also allows instructors to make quick adjustments to the target’s exposure angle, modifying the degree by which the target pops out from behind a wall or object.

INDOOR RANGE

AutoTargets brings reactive target shooting indoors. Since AutoTargets is a paper based target system it essentially eliminates bullet splatter. AutoTargets wireless mesh network makes it easy to set anywhere downrange and control from behind the firing line. The available rubber block accessory creates an ideal ballistic stand.

OUTDOOR RANGE

AutoTargets portable design makes it easy so use on any outdoor range. Because it doesn’t require an outside power or air supply AutoTargets can be positioned anywhere on a range without the need of expensive infrastructure. An available ballistic shield holds the lift unit and CO₂ canister behind a protective barrier making it possible to simply set in a field without the use of another barricade system.

BEHIND BARRICADES

If your range is equipped with a barricade such as a kneewall, bunker, or Line of Fire™ simply set up AutoTargets behind these barricades and your training is ready. The portability of AutoTargets makes it easy to reposition the targets, keeping trainees on their toes. The app makes it easy to score and reset training scenarios.
SETTING UP YOUR SYSTEM
AutoTargets can be configured in a number of different ways, providing the flexibility you need.

- **Battery Power:** AutoTargets uses 3-cell 4000 mAh LiPo Batteries that provide 8000 lifts or up to 20 hours of idle time.

- **CO₂ Tank:** A single 20 oz CO₂ tank actuates a target up to 1000 times and can be directly attached to the lifter (when shielded by a ballistic shield) or placed up to 500 feet away.

- **Daisy Chain:** One 20 oz CO₂ tank can supply up to 10 total lifters* with a maximum total hose length of 500 feet. 50-foot tubing segments are included with each lifter.

- **Wireless Range:** AutoTargets uses a mesh network that automatically connects units to each other when they are powered on. Units can be controlled up to 50 yards from the control system and 250 yards from unit to unit. Adding range extenders can expand this distance 1200 yards.

* Freezing temperatures may reduce the ability to daisy-chain lift units.

ACCESSORIES

**HIT SYNC TARGET**
3 or 4-zone silhouette targets detect shots within zones. Targets last up to 1000 rounds depending on caliber.

**HIT SYNC NON-LETHAL**
Pressure sensitive system works with Airsoft, Simunition, UTM, FX, and Force-on-Force ammunition.

**BALLISTIC SHIELD**
An AR500 plate with a 1” rubber fascia and base system mount. Rated up to .308 nonarmor piercing rounds.

**WIFI EXTENSION**
Increase range from target to target or target to tablet up to 1200 yards.

**MOUNTING SYSTEMS**
Available universal mounting and wall mounting systems attach AutoTargets to various surfaces.

**CO₂ TANK**
Compressed CO₂ tanks that can deliver 60 psi control target lifting. CO₂ provides consistent pressure over longer periods of time compared to high pressure air.
